

Earthworks Testimonials

"My company engaged two Hemisphere GPS X200 excavator guidance systems late Fall 2009 and we have proven them to: Increase productivity and impact the bottom line by 25+% even on smaller jobs; Rugged enough to operate continuously through -30°C conditions; as well as build confidence, safety and interest within the operators. My company's future includes Hemisphere GPS Earthworks machine control."

Prattco Excavating Ltd.
Calgary, Alberta**

"The Hemisphere GPS excavator guidance system has greatly enhanced the day-to-day interest in approaching both typical and atypical projects. The breadth of information and job methodology options available to me in the cab are tremendous."

- Eugene Bleau, Operator

"The X200's combination of GPS heading plus tilt sensors delivers 'True and Full' 2D excavation guidance and with confidence frees me from continuous laser height referencing for many applications. Proven up to 500+ lateral feet, the X200 can deliver an accuracy similar to continuous laser referencing. With the right care, there may not be a lateral limit! I look forward to investigating their X300 (3D excavator guidance) system."
